Assignment 9: Coffee Shop Website Using Codex

Part 1: Website Requirements

Create a fictional coffee shop with a name and design of your choice.

Your website must include:

1. **Navigation Bar:** Coffee shop name and links to Home, Menu, and Contact.
2. **Home Section:** A welcoming message, a large coffee-related image, and a short description.
3. **Menu Section:**
    - At least **10 different drinks and snacks**, each with an image, name, and price.
    - At least **3 categories**, such as Hot Drinks, Cold Drinks, and Snacks.
4. **Contact Section:** Coffee shop address, opening hours, and contact information (fictional information is acceptable).
5. **Footer:** Coffee shop name and copyright information.

Part 2: JavaScript Functionality

Use JavaScript to add at least **one interactive feature** to your website.

Choose one:

- Filter menu items by category (Hot Drinks, Cold Drinks, Snacks).
- Add an "Add to Order" button that shows selected items.
- Create a search box to find drinks or snacks by name.

Part 3: Responsive Design

Your website must:

- Work on desktop and mobile screens.
- Use CSS Flexbox, Grid, or media queries.
- Display images and text correctly on different screen sizes.
- Have a clean, consistent, and user-friendly design.

Part 4: Using Codex

Use Codex to help you build and improve your website.

You can ask Codex to generate HTML, CSS, and JavaScript, fix errors, improve the layout, and make the page responsive.

Keep screenshots of at least 3 prompts you used with Codex during development.

Part 5: Firebase Deployment

Publish your completed website using Firebase Hosting.

Your website must be accessible through a public Firebase URL.

Submission Requirements

Submit to D2L:

1. **Firebase URL** — Link to your live website.
2. **3 Codex prompts**— Show how you used AI to build or improve the website. Alongside with the URL, add a text file and write down all your prompts. Name it : promptHistory.firstname-lastname
